

The best free mockups to your amazing work!  
Here you will find information about the [license](#),  
and a [tutorial](#) on how to use a mockup.

# LICENSE

## Basic information

All downloads and any other content on graphicfriend.com belongs to the owner of graphicfriend.com and the graphicfriend.com brand. All files downloaded from graphicfriend.com are distributed under the Royalty Free license and can be used in commercial projects.

You can use the files that you download from graphicfriend.com in any of your projects. You can use the files downloaded from the site graphicfriend.com in digital form (online store, banners for a website or social networks, portfolio, etc.), and in printed form (flyers, banners, posters, posters, etc.). They can also be used on YouTube, television and other media.

When using files downloaded from the site graphicfriend.com, you do not need to add a link to the site and information from where they were downloaded.

## Limitations

Files downloaded from graphicfriend.com may not be distributed and/or sold in PSD format (or any other open editable format). The files may not be distributed on any site other than graphicfriend.com. This applies to modified and unmodified files.

Files downloaded from graphicfriend.com cannot be separated from this license.

## Use in portfolio

You can use files downloaded from graphicfriend.com in your private or corporate portfolio and website as non-editable images (PNG, JPG, GIF, BMP, etc.). Use in this case is not limited.

## Use in print

Use in print is similar to use in a portfolio. You can use files downloaded from graphicfriend.com to print as non-editable images (PNG, JPG, GIF, BMP, etc.). You can use files by attaching them to a PDF, EPS, INDD, etc. (depending on the requirements of the printing house). Attached files must be flattened and uneditable.

## Publish editable files

Mockups (and other files) downloaded from graphicfriend.com may not be redistributed in any editable format. Mockups (and other files) that I share on graphicfriend.com can only be shared on graphicfriend.com, but you can share a link to graphicfriend.com or a mockup.

## Publication on stocks

You may not distribute and/or sell files downloaded from graphicfriend.com on stock sites in any way.

# TUTORIAL

## Open mockup

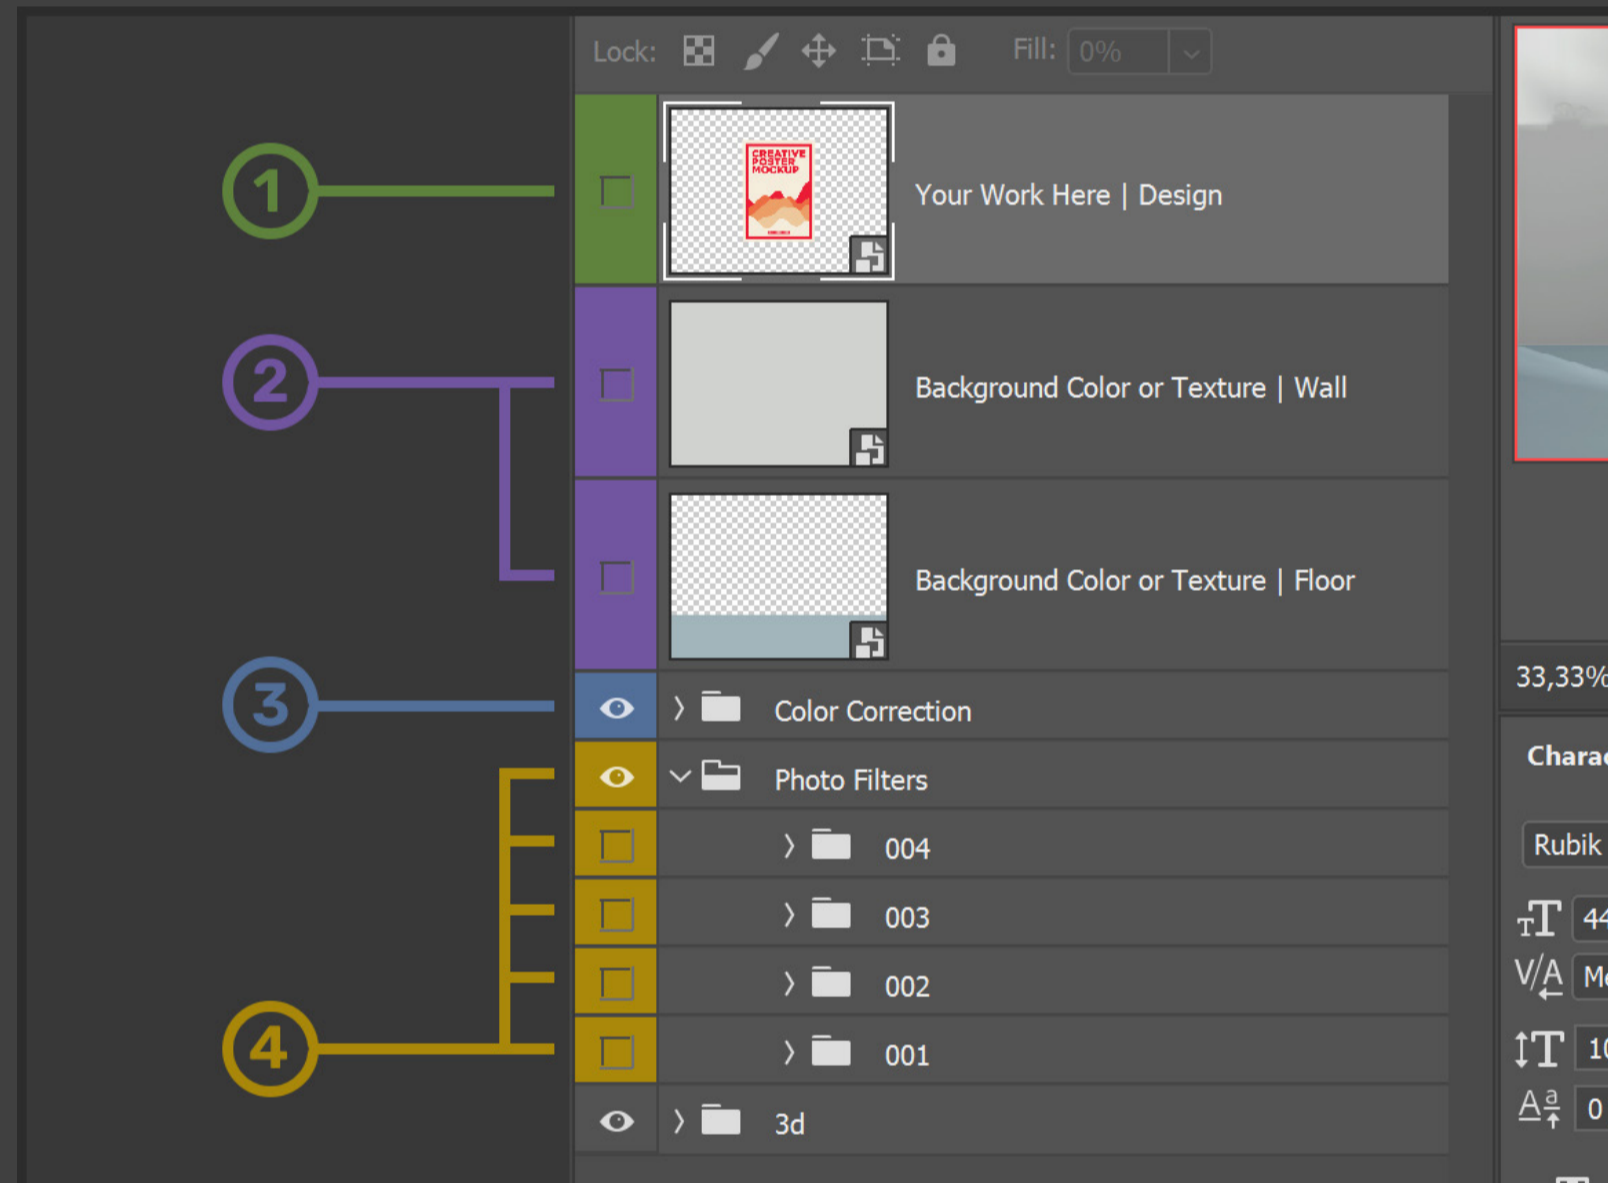

To open the mockup, double click on the PSD file, the file will open in Photoshop or any other program for editing PSD files (If you have Photoshop or any other program for editing PSD files installed).

In the opened mockup file, you will see an example of a design project that I made to demonstrate how the mockup works, you just need to replace it with your own design.

## Edit Smart Object layers

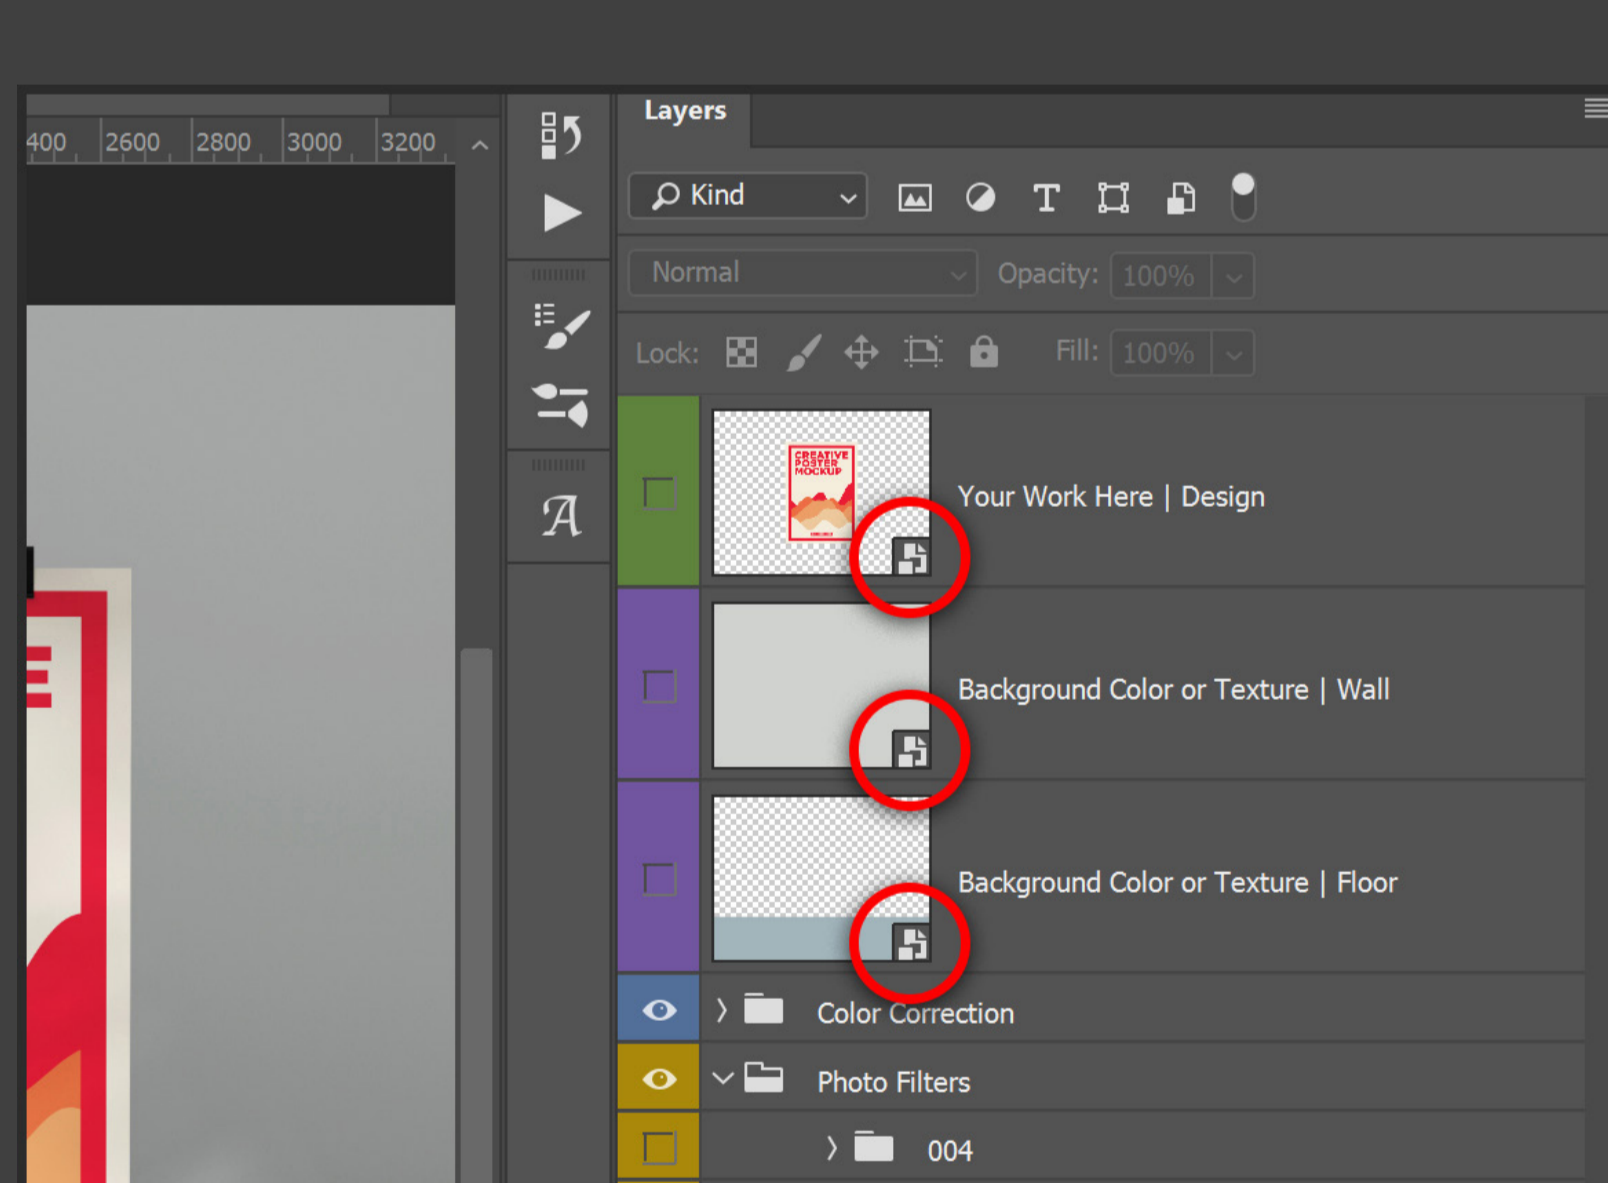

All design changes and modifications in an open mockup occur in the Layers panel.

All layers are named and arranged so that it is convenient for you to work with the mockup.

- 1 - **Your Work Here** - In this layer (or layers) is the main design that you can modify.
- 2 - **Background Color or Texture** - In this layer (or layers) you can change the background color or add texture.
- 3 - **Color Correction** - Layer (folder) in which there is a small color correction, you can turn off, edit or leave the color correction as it is.
- 4 - **Photo Filters** - Photo filters to help add mood and style. You can combine different photo filters.

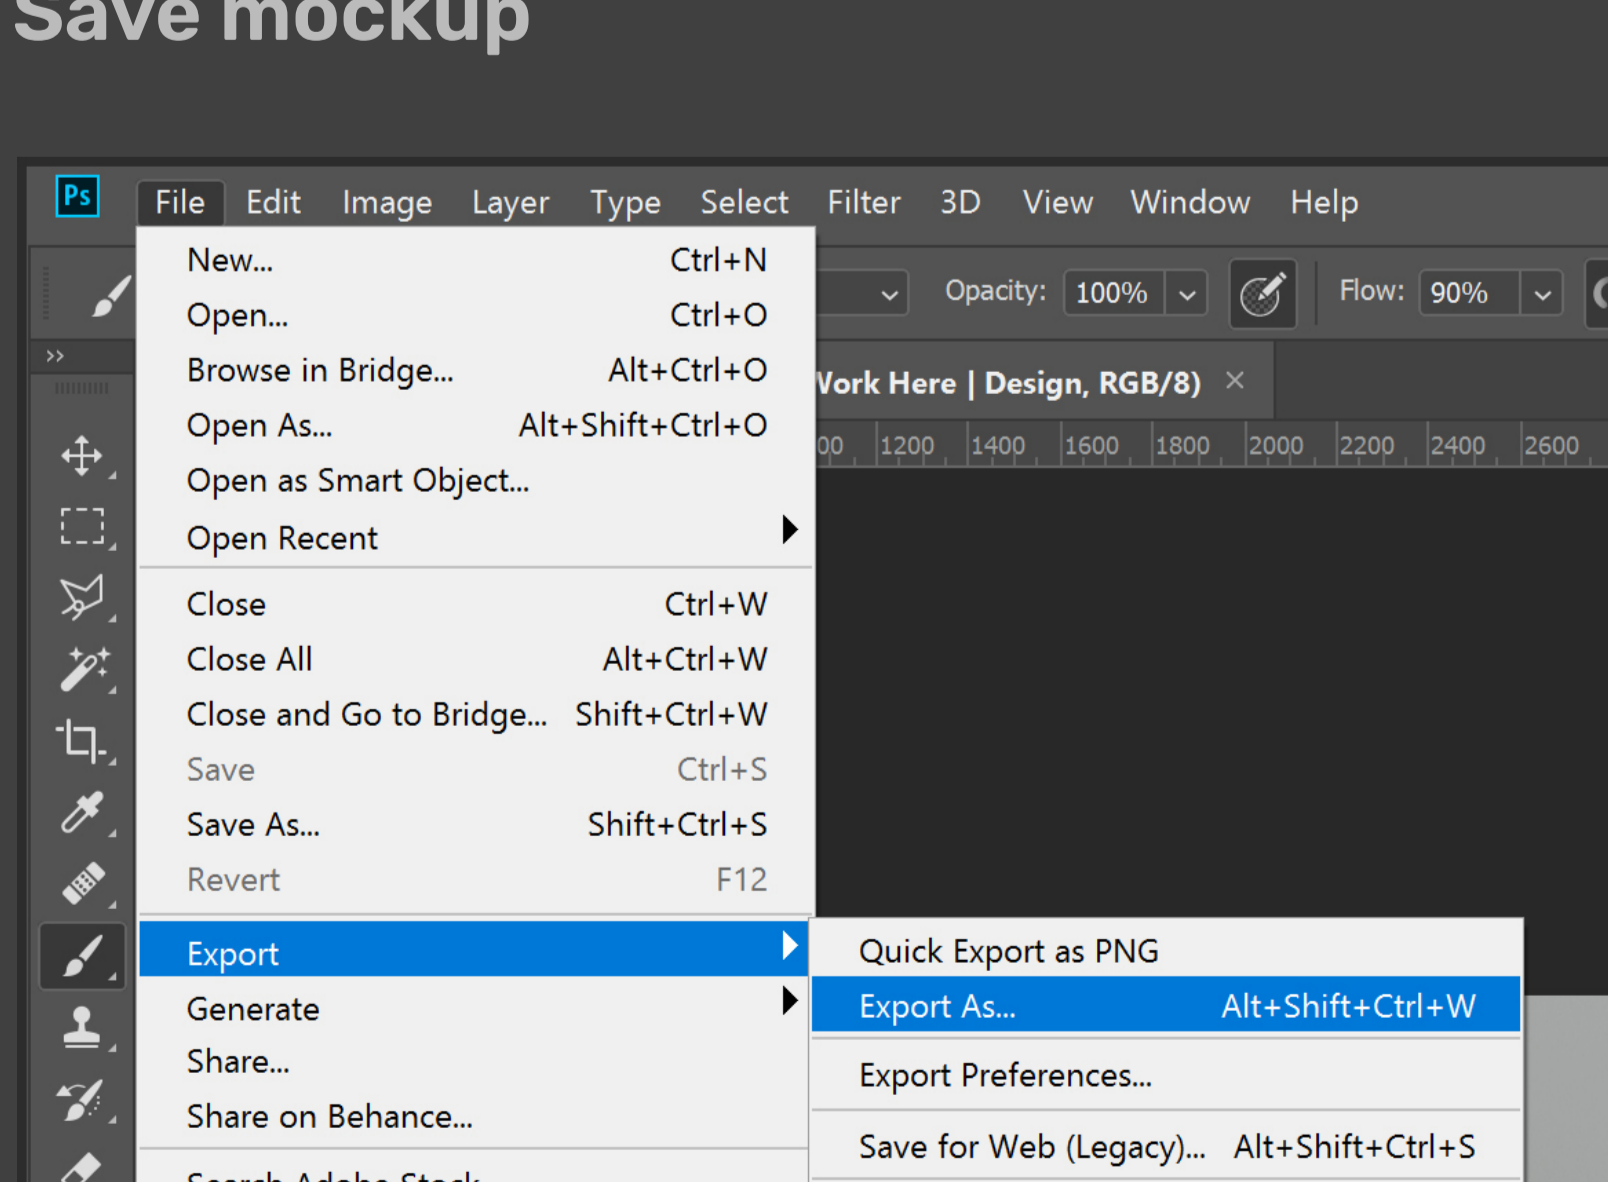

The layers in which the main changes and modifications take place are called "Smart Object Layers", they are easily recognizable by a small icon on the layer thumbnail.

For example, to change the color or texture of the background, you need to find the Background Color layer. As soon as you've found it, simply double-click on the layer's thumbnail and a new window will open where you can change the background color or add texture. As soon as you change a color or add a texture you can close this window and save your changes.

In order to insert your design into the mockup, you will need to find the Your Work Here layer (be careful, there may be several such layers). Having selected the desired layer, double-click on the layer thumbnail, a new window will open in which you can add and modify your design project. Save your changes in this window.

## Save mockup

If everything is done correctly, in the main window of the mockup you will see your design project. It remains only to save the file. You can save the PSD file and also save the result as JPG to make it easier to show the result to the client, add it to the portfolio or on your website.
